Timber and Bamboo: The Flooring Trend Guide

Unique bamboo and timber flooring.

Interior fashion trends change over time. Some are last, others aren't. Professionals can tell the difference from an investment and trend or trend. It is clear that flooring is a significant investment.

In addition to adding class and style Alongside adding class and style, a solid hardwood or bamboo floor will surely increase the value of your house since like tiles, a wood or bamboo flooring will last for a long time. The timeless nature of wood is accepted with such a conviction

that some tile manufacturers are trying to emulate the timber grain. In addition, there is a current trend among a handful of tile manufacturers to create thicker, longer tiles to ensure that, when laid they resemble the look of timber. However, there will always be one authentic. Unfortunately for tile makers, even though wood floors maintain their elegance beauty, class and elegance Tiles remain tiles. So, just like tiles, in general they can be dated. Beware of imitation timbers.

Balance is the key.

If you're considering a flooring to build a new home or for renovating an existing one It's all about balance classical versus modern and traditional versus contemporary and function versus form, design versus style. You can also take home the samples we have of our unique, and highly stable bamboo or timber with the assurance that it will not be able to bend, cup or expand. You can also be assured that your floor is laid by trained, expertly controlled and licensed installers.

Colors you can't detect. However, the feeling is there.

One of the best qualities of bamboo and natural wood flooring is its ability to be a classic neutral. In the world of design neutrality is considered to be the king as it serves as the background colour on which other items can shine, including rugs, furniture, or decorations. It is still the most sought-after option for interior designers due to the fact that it warms the heart and the house.

Grey is a popular color. This can be seen in its usage in large-scale finishes like flooring as well as paints and fabrics and also in accessories and small objects. neutrals are a good choice and can stand against the tests of time. You'll feel confident knowing that your choice will not deteriorate. This is why the flooring designers are increasingly choosing grey-toned timbers like Spotted Gum, French Oak, and Grey Gum. A little more neutral, yet warming and moist in tone Jarrah introduces "rose" as a base colour that somehow creates a feeling of calm and solidity. Similar to chocolate, some woods are savoury but aren't less warming or neutral due to this.

Other popular choices include oaks, which are both darker and the lighter, more blonde types. These stunning colors blend elegantly with modern highlights. It is likely that you already know that, while wood generally darkens with time Bamboo floors tend to get lighter.

Wider, longer timber as well as bamboo boards

Bayswater Flooring made of wood also allows you to give the appearance of textured. This doesn't refer to shag pile rugs or carpeted bathrooms. Rugs with a smaller pile, like flat weaves or jute, are in fashion and can be a fantastic method of adding texture and not breaking the bank.

In the flooring industry, there is an increase in parquetry, herringbone, and chevron flooring trends. It's a gorgeous option that gives instant glamour that is reminiscent of Parisian residences which have never lost their fashion.

The longer, wider boards are being increasingly used and are still very popular. They are stylish and are particularly suitable for more open, spacious areas. In many instances, modern apartments look amazing with the bigger board style and also.

Technology-driven superior

The quality of flooring is paramount. The days of flooring that was compressed cupping, shrinking, delaminating and distorting, twisting or warping are long gone. Utilizing a patent-pending process known as stabilized flooring chooses by hand the most superior layer due to its visual consistency, which means it's clean and free of blemishes. The middle layer, which comes from the same plant, is less pleasing visually, but is equally difficult. Made to exact specifications the lowest layer isn't the most visually pleasing. Kiln-dried according to precise specifications every layer is joined under a huge pressure using an environmentally friendly adhesive. The result is stable bamboo and ***Melbourne timber flooring*** that has incredible durability. Top, sides, and sides are sealed using several layers of polyurethane. This is why Melbourne timber flooring are guaranteed to last for a long time.

Sustainable flooring solutions for flooring

One design trend for interiors that is becoming increasingly sought-after for consumers is the choice of floors and finishes that are environmentally sustainable. It isn't even thought of as to be a fashion by a lot of. It's more of a design necessity as people get more informed about the issue. The unique, stable bamboo and Melbourne timber flooring utilizes functional log cuts, which means both bamboo and timber maximise the usage of the material and minimizes waste, without compromising on aesthetics, quality or appearance. It is a powerful step towards more educated, better decisions. Sustainable products do not require sacrificing the design or quality.

Conclusion

A solid hardwood or bamboo floor will surely increase the value of your house. The timeless nature of wood is accepted with such conviction that some tile manufacturers are trying to emulate the timber grain. Unfortunately for tile makers, even though wood floors maintain their elegance beauty, class and elegance, in general they can be dated. Grey is a popular colour and can stand against the tests of time. This is why flooring designers are increasingly choosing grey-toned timbers.
